#### **DETAILED ACTION**

This Office Action corresponds to application 10/750,885 which was filed 05 January, 2004. Claims 31-41 (renumbered 1-11) have been allowed.

#### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/29/2009 has been entered.

#### ***Response to Amendment***

Claims 1-30 have been cancelled and subsequently claims 31-41 have been added. Claims 31-41 (renumbered 1-11) have been allowed.

#### ***Response to Arguments***

Applicant's arguments, see remarks, filed 9/29/2009, with respect to claims 31-41 have been fully considered and are persuasive. The 35 U.S.C. 103(a) rejection over Waldorf in view of Campbell and further in view of Meinig has been withdrawn.

### Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

In order to provide better clarity to the present invention, Applicant has cancelled and rewritten the claims to emphasize the usage of instance and continuation data tables for correlating data.

Specifically, Claim 31 recites in part,

*"...searching the continuation data table for a record that includes the second identifier;*

*determining based on the record stored in the continuation data table that the second identifier is correlated with the first identifier;*

*creating a new record in the continuation data table that correlates the first identifier with the third identifier; subsequent to the third application performing the subsequent portion of the business process, receiving third data from the third application that was generated during the performance of the business process, the third data being represented with the third identifier;*

*accessing the record in the continuation table that stores the first and third identifiers to determine that the third data represented by the third identifier corresponds with the first data stored in the record of the instance data table and represented by the first identifier; and*

*storing the third data in the additional fields of the record in the instance data table such that the third data is also represented by the first identifier."*

Similarly, Claim 35 recites in part,

*"...searching a continuation data table, that stores correlated identifiers, for a record that includes the identifier such that:*

*upon locating a record that includes the identifier, a correlating identifier is retrieved from the record and used to locate a record in an instance data table that includes data represented by the correlating identifier, and upon locating the record in the instance data table, the data represented by the identifier is inserted into the record in the instance data table; and*

*upon failing to locate a record that includes the identifier, a new record is added to the instance data table that includes the data and the identifier; and*

*searching the continuation data table for a record that includes the identifier in conjunction with a different identifier such that: upon locating a record that includes the identifier, a new record is added to the continuation data table that correlates the different identifier with the subsequent identifier; and*

*upon failing to locate a record that includes the identifier, a new record is added to the continuation data table that correlates the identifier with the subsequent identifier."*

The above limitations in the context of their respective claim appear novel over the cited prior art as they are not expressly or inherently recited in the cited prior art either alone or in combination.

Specifically, the closest found prior art of record, Waldorf et al. (U.S. Patent Application 2002/0038228) discloses a system for analyzing business processes. Waldorf is noted to receive data from applications performing portions of a business process (e.g. figure 10) and receiving data when that portion completes (e.g. Waldorf, abstract) to build a data store for use in identifying and analyzing instances of a business process (see Waldorf, paragraph 0019 and figures 2A-2B). Waldorf is further noted to provide an instance table (e.g. drawing reference 208) to accumulate multiple records about an instance (e.g. Waldorf, 0057).

Waldorf however, lacks the recitation of a continuation table and further the usage of the continuation table with the instance table to link, correlate, and add to a single instance record data from subsequent applications to data from previous applications using disparate identifiers as specifically recited in the claims as noted above. Further, Campbell (U.S. Patent 6,856,970) and Meinig (U.S. Patent 6,934,714) would not fairly render obvious claims 31 and 35 in combination with Waldorf nor anticipate the claims alone for the same reasons.

Depending claims 32-34 and 36-41 are allowed by virtue of their dependency upon allowed claims 31 and 35, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
